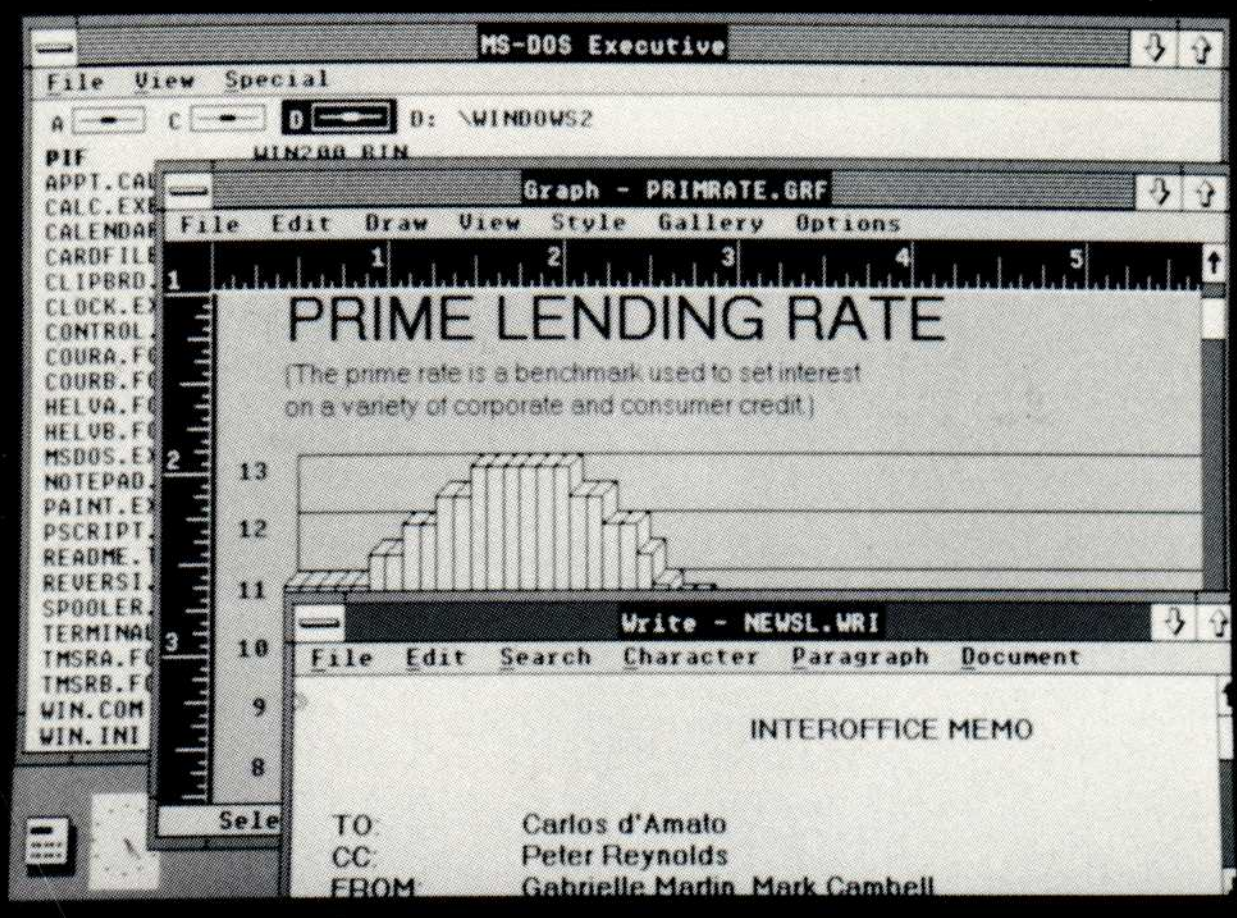
The soul

of the new

machines™

Microsoft® Windows

You'll find lots of Microsoft Windows advantages in your new program.



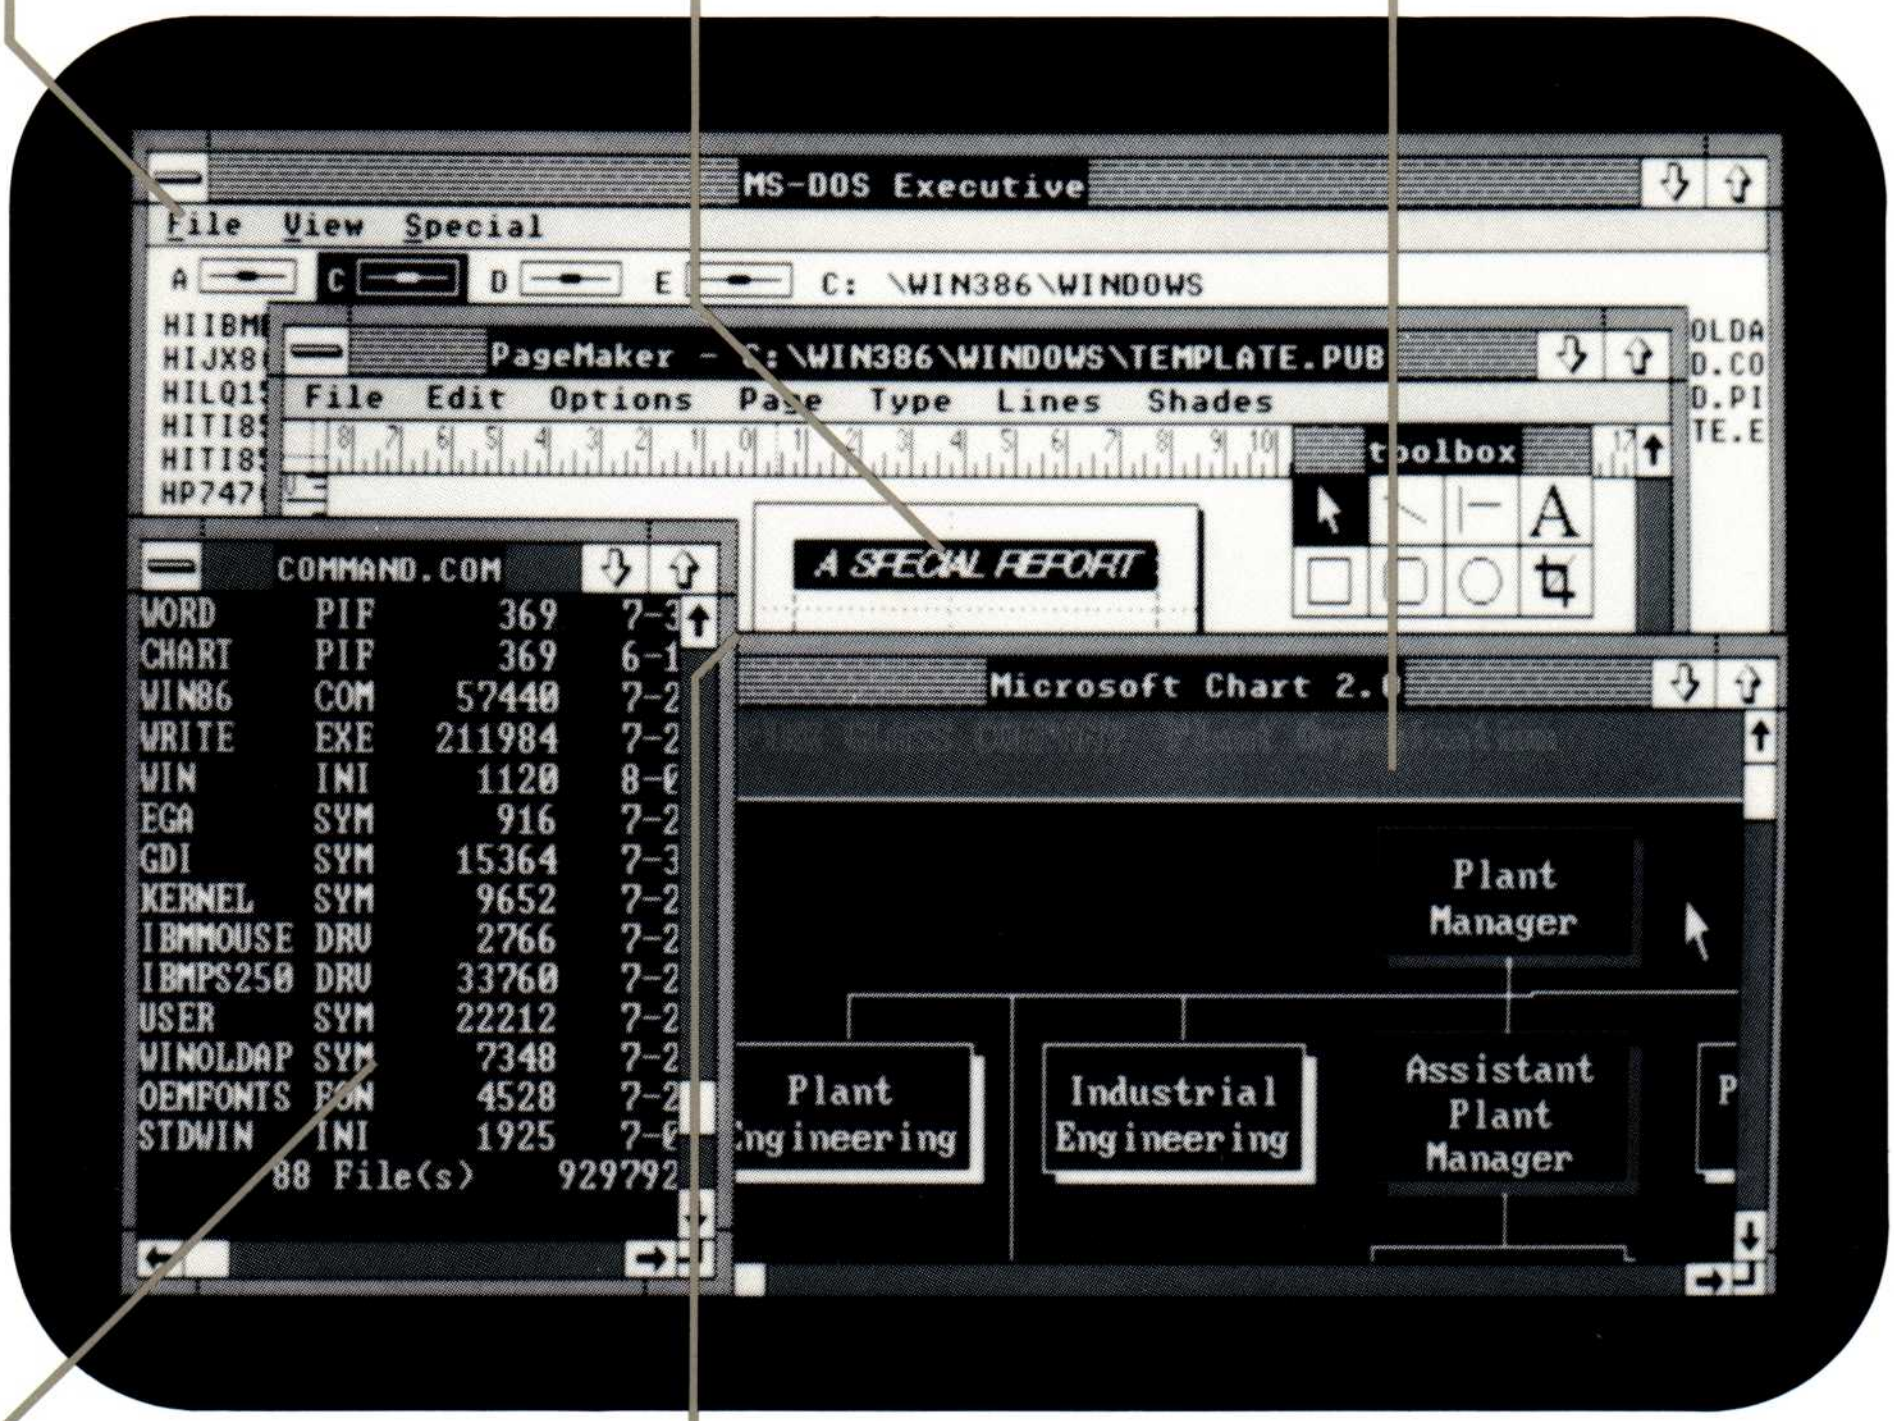
Microsoft®

Microsoft Windows is visually consistent with the presentation manager that will be the graphical user interface for OS/2.

Enhanced keyboard and mouse controls let you move more quickly through menus and dialog boxes.

The graphical user interface provides full what-you-see-is-what-you-get (WYSIWYG) display.

Microsoft Windows/386 lets you run any DOS application in a window.



The active window is always brought to the front.

New overlapping windows provide more complete control of any window on the screen.

Microsoft Windows. A better way to get things done.

Microsoft Windows is like a control center for your computer. It helps you get the most out of your entire system by integrating all your activities in one easy-to-use environment.

With Microsoft Windows you can run several programs at once and switch between them easily. You can even work with more programs than would normally fit in memory at one time.

You can copy files, format disks, and perform other DOS functions without leaving your program. And take advantage of a number of useful desktop applications that come with Microsoft Windows, including a word processor and a paint program.

Get more out of your programs.

With Microsoft Windows you can get the most out of all your information by easily exchanging it between programs, both DOS applications and those written specifically for Windows.

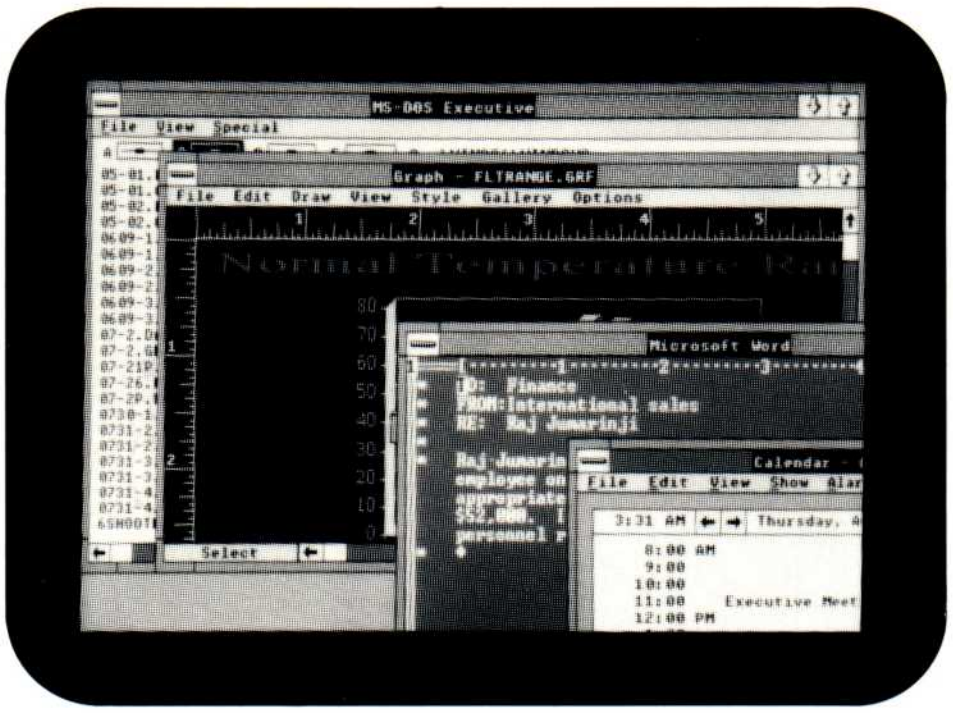
For example, with Microsoft Windows you can consolidate a report produced with a word processor with information from a spreadsheet and a database, and then add the impact of charts from a graphics program.

The result: a more effective finished product produced in less time and with less effort.

Two kinds of Microsoft Windows.

No matter what kind of Intel processor your personal computer is equipped with, there's a Microsoft Windows program for you. Microsoft Windows Version 2.0 is designed for computers that use the Intel® 8086 or 80286 processor. Microsoft Windows/386 is specifically for 80386-based computers. It gives you all the advantages of Microsoft Windows 2.0, plus the power to exploit the 80386's multi-tasking capability. For example, with Microsoft Windows/386 you can download a file using a communications program in the background while you work on a spreadsheet in the foreground.

Both Microsoft Windows 2.0 and Microsoft Windows/386 provide the same easy-to-use graphical user interface—just like the one your Microsoft Windows program has. And one visually consistent with the user interface of tomorrow's applications for the new OS/2 operating system.



With Microsoft Windows/386 you can instantly switch between applications, copy and paste between DOS and Windows applications, and see DOS and Windows applications on the screen simultaneously.

Give your computer Microsoft Windows.

Discover how productive you can be with the Microsoft Windows features that are built into your new program. Then add Microsoft Windows itself to your computer to make *all* of your work easier.

For more information or for the name of the Microsoft dealer near you, call the Microsoft Information Center toll-free at (800) 426-9400. From Washington State and Alaska, call (206) 882-8088.

Microsoft Windows Version 2.0 System Requirements

- IBM® Personal System/2™ Series personal computer, IBM Personal Computer, or 100% compatible
- 512K memory
- DOS 3.0 or higher
- One double-sided disk drive and one hard disk (recommended) or one double-sided disk drive and one 1.2 Mb (5¼") disk drive; or one 3½" (740K) disk drive and one hard disk (recommended) or two 3½" (740K) disk drives
- Graphics adapter card (COMPAQ graphics adapters, Hercules® Graphics Card, IBM VGA, IBM EGA, or compatible)

  Note: Use of the Microsoft Mouse is optional.

  Microsoft Windows Version 2.0 is available in 5¼" and 3½" disk versions, packaged separately.

Microsoft Windows/386 System Requirements

- Personal computer using the Intel 80386 processor (including COMPAQ DESKPRO 386™, COMPAQ 80386-based personal computers, IBM Personal System/2 Model 80 or compatible) or equipped with an Intel Inboard™ 386/AT
- 1 Mb memory (2 Mb recommended)
- DOS 3.1 or higher
- One 1.2 Mb (5¼") or 1.4 Mb (3½") disk drive
- One hard disk with 2 Mb available storage space
- Graphics adapter card (COMPAQ graphics adapters, IBM VGA, IBM EGA, or compatible)

  Note: Use of the Microsoft Mouse is optional.

  The Microsoft Windows/386 package contains both 5¼" and 3½" disk versions.

Now get the rest of them.

Your new program includes a lot of standard Microsoft Windows features. Features like drop-down menus and dialog boxes that increase your productivity by letting you do more work with less effort.

The complete Microsoft Windows program provides even more capabilities, capabilities that let you tap the full potential of your personal computer. So why not get *all* the advantages of Microsoft Windows?

The details are right inside. Check them out, then tell your Microsoft dealer you want to add Microsoft Windows to your computer.
